## **1 INTRODUCTION**

Delhi Transco Limited is the State Transmission Utility of the National Capital Territory of Delhi. It is responsible for transmission of power at 220KV and 400KV level, besides up gradation operation and maintenance of EHV Network as per system requirements.

After the enactment of Electricity Act 2003, a new department under the name and style of **State Load Despatch Centre (SLDC)** under Delhi Transco Limited was created, as an Apex body to ensure integrated operation of the power system in Delhi. Earlier the department was part of O&M Department of Delhi Transco Ltd / Delhi Vidyut Board. SLDC Delhi started its function on the First of January 2004. SLDC is responsible for the real time Load Despatch function, O&M of SCADA System and Energy Accounting.

It's mission is to facilitate intra and inter state transfer of power with Reliability, Security and Economy on sound commercial principles.

### 3 ORGANISATIONAL SETUP OF SLDC DEPARTMENT

## **4 Functions of various circles of SLDC**

- i) System Operation
- ii) Energy Accounting
- iii) SCADA and Communication

### **4.1 System Operation**

System Operation Circle is mainly responsible for techno-economic scheduling and dispatch of electricity within the NCT of Delhi in accordance with the contracts entered into with the licensees or the generating companies operating in Delhi.

The System Operation Division monitors grid operations, exercises supervision and control over the intra-state transmission system and carry out the real time operation of grid control and dispatch of electricity within Delhi through secure and economic operations of the State Grid in accordance with the Grid standards and the State Grid Code.

### **4.2 Energy Accounting**

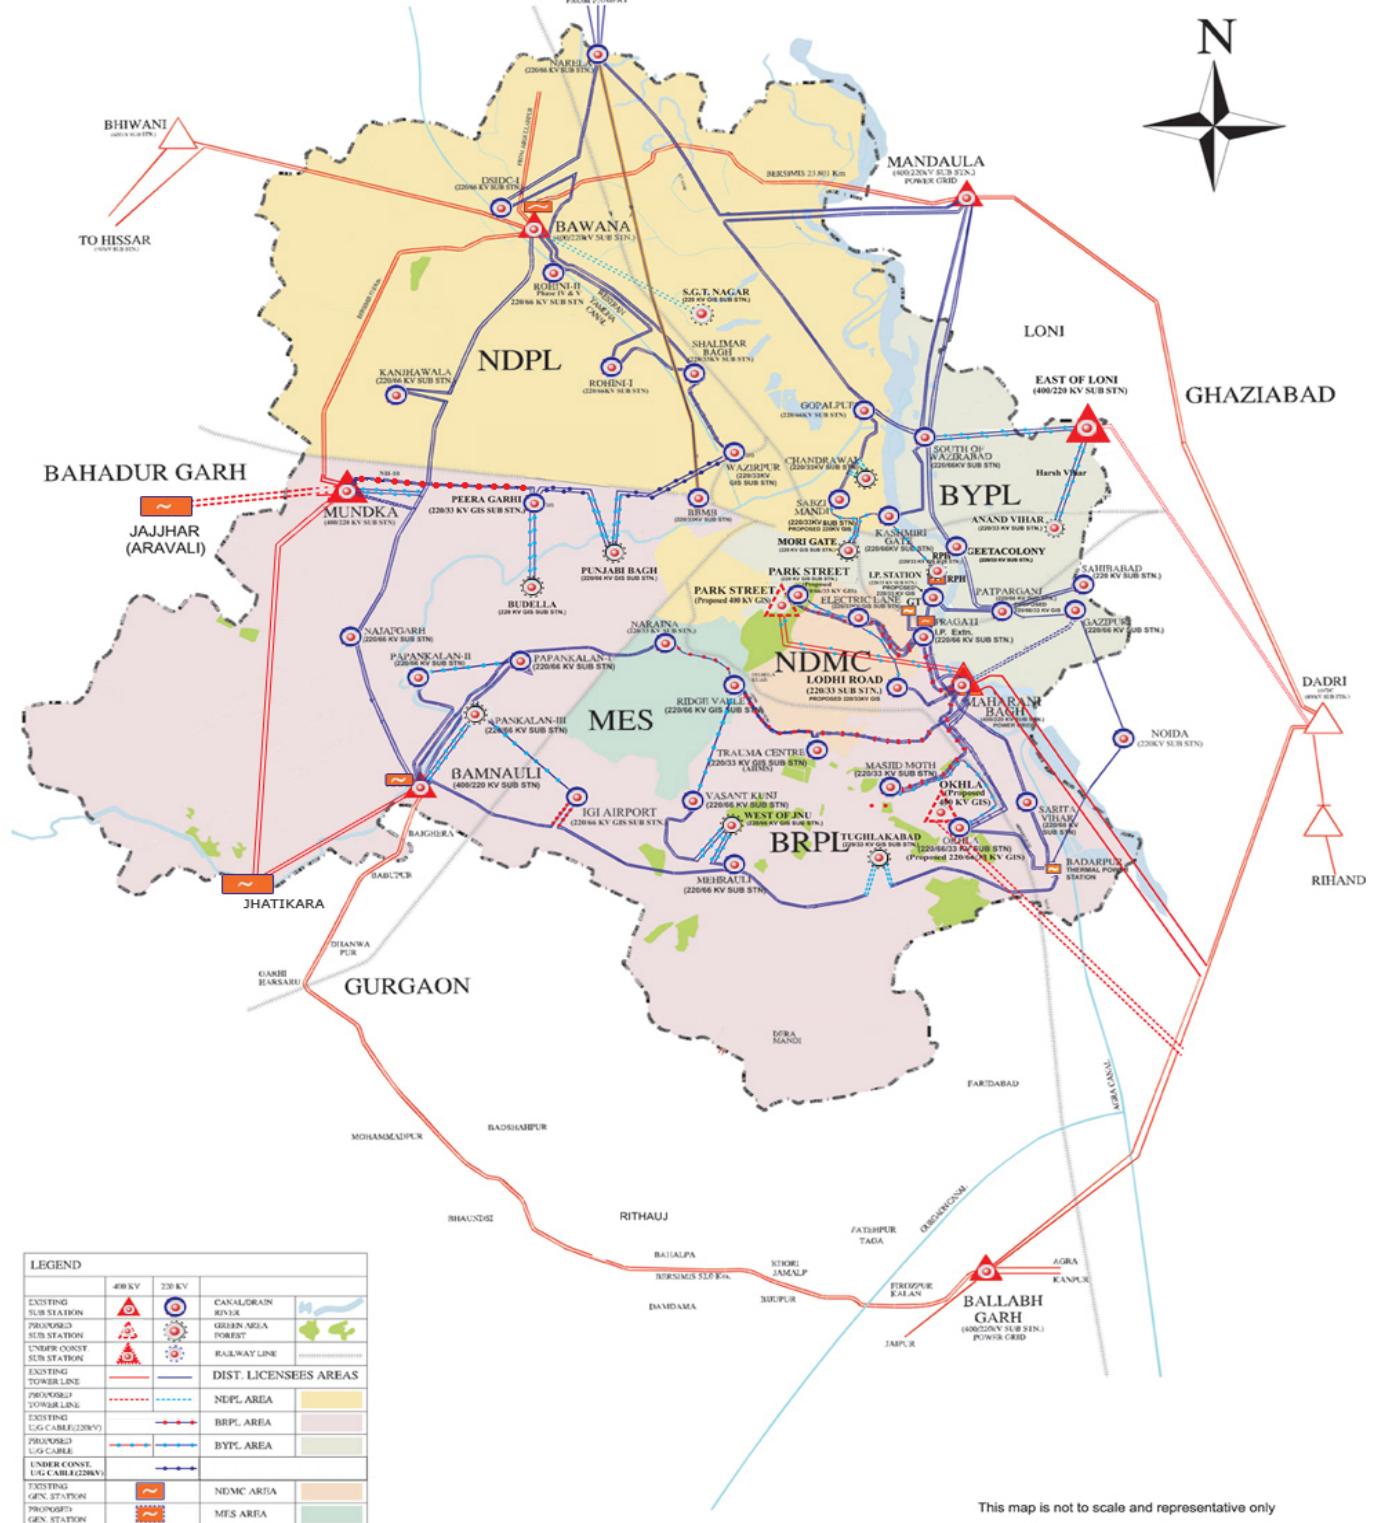

The circle is to undertake the accounting of the quantity of electricity transmitted through the state grid as envisaged in the Electricity Act. This includes the preparation of State Energy Accounts indicating Availability, Scheduled Generation, Plant Load Factor computation, Open Cycle Operation of Gas Turbines etc. in respect of Generating Stations within Delhi. It has also to prepare and issue weekly Deviation Settlement Mechanism (DSM) Accounts for Intrastate utilities.

### **4.3 Supervisory Control and Data Acquisition (SCADA) and Communication**

SLDC has the state of art Load despatch centre having SCADA (Supervisor Control And Data Acquisition System) for retrieving information from generating stations and grid sub stations consisting of analog data (like Mega Watt, Voltage, Current, MVar) and digital status of various elements (like Circuit Breaker, Isolator etc.) for real time monitoring and control of grid, enabling it to operate safely, securely and economically.

The data from sub station is received through an existing communication ring comprising of OPGW and Microwave links. For indicating this data on control room monitors, the hardware and communication links at sub stations are maintained round the clock by the hardware and software sub divisions. The software sub division of SCADA has developed in-house softwares for various activities.

#### **System configuration during the incident**

Prior to the incident, Bus Coupler at Pragati was in Off position and Pragati generation (GT-1, GT-2 & STG) was connected to Grid through 220kV IP Ext (Pragati)-Sarita Vihar-BTPS-Ballabgarh, BTPS-Alwar & BTPS-Mehrauli-DIAL-Bamnauli.

Due to tripping of 220kV BTPS-Mehrauli ccts and 220kV BTPS –Ballabgarh Ckts & 220kV BTPS-Alwar ckt. Pragati STG got tripped in jerk and a small island of Pragati GT-1 & GT-2 formed feeding the load of 220kV Park Street Stn & 220kV Gazipur Stn. Island was tried to synchronize with grid at 220kV I.P. Extn (Pragati) and also at 220kV Maharani Bagh but could not synchronize.

System was restored after getting Ballabgarh supply from BTPS and further extended to Sarita Vihar and Pragati Stn at 13.45hrs.
